- Stores flat so they’re easy to store.
- Individually bagged for extra infection prevention.
- Pre-assembled — deploys with one simple flip.
- Plastic dispenser holder (separate) can be easily mounted to the wall either with 2 screws or with no holes using 3M™ Command™ Strips.
- Can also be placed on shelf, if wall mount not applicable.

IDEAL FOR USE IN:
- OPERATING ROOMS
- EMERGENCY ROOMS
- LABOR & DELIVERY
- BURN UNITS
- ENDOSCOPY AREAS
- DIALYSIS AREAS
- AND MORE ...

PROTECT YOURSELF AND YOUR PATIENTS
NEW TIDIShield™ Eyewear Dispensers from TIDI® provide protective eyewear when and where you need it.

Eye protection is not always readily available to healthcare providers. To solve this problem, TIDI® created convenient eyewear dispensers that can be easily mounted where you dispense masks and gloves.

**Why Disposable Eyewear?**

- Infectious diseases can be transmitted through various mechanisms, among which are infections that can be introduced through the mucus membrane of the eye (conjunctiva).
- Infectious agents (viruses and bacteria) can be introduced directly to the eye (i.e. Blood splashes, respiratory droplets generated during coughing or suctioning) or from touching the eyes with contaminated fingers or objects.
- Prescription glasses or contact lenses are not considered eye protection.
- The World Health Organization (WHO) and the Center for Disease Control and Prevention (CDC) have recommended eye protection be used during patient care activities that are likely to generate splashes and sprays of blood, body fluids, and secretions.

You dispose of your masks, gloves and gowns every use, why not eyewear?
